

Jetting in Circles?

JetBugs

sewer grease control

Don't Just Dislodge Grease,
Devour It.

4

Four Ways To

Devour Grease While Jetting

Bred to digest F.O.G. (fats, oils and grease) in sewers, biodegradable JetBugs combines chemical and microbial degreasers to clean fast and effectively. JetBugs is a powerful first step in preventing SSOs and residential backups, and to boosting sewer capacity.

1 Easier Disposal

When you extract jetting effluent, JetBugs **microbes** continue to digest F.O.G. in the truck's waste tank, making subsequent disposal and clean-up less messy.

The JetBugs automated dispenser installs on any truck, drawing solution directly from swappable pails and accurately maintaining your desired mix ratio. **Details on back.**

2 Enhanced Jetting

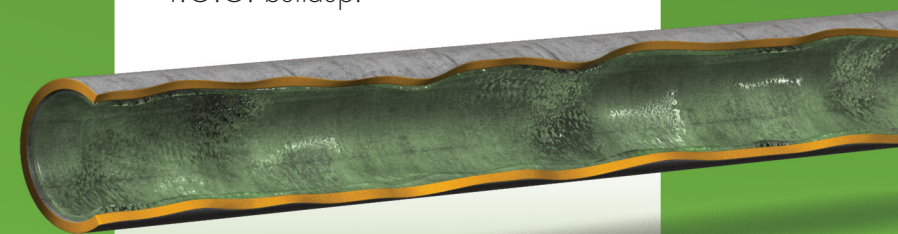

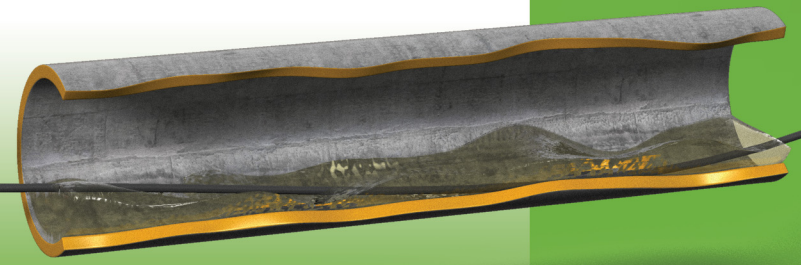

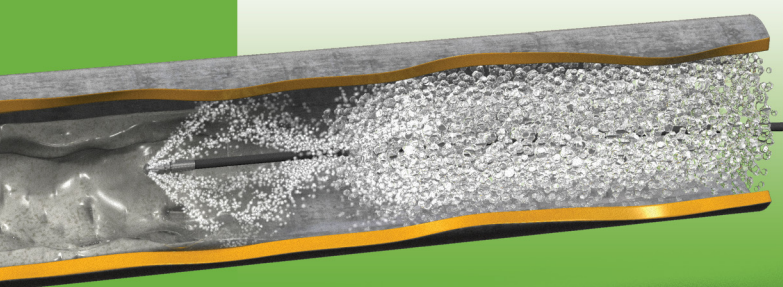

A potent **chemical degreaser** immediately breaks up thick F.O.G. deposits, boosting the speed and effectiveness of jetting. Foaming action ensures all surfaces are targeted.

3 Downstream Protection

An entrained **microbial degreaser** digests jetting effluent so F.O.G. doesn't reattach to downstream pipes or clog lift stations.

4 Lasting Results

Microbes colonize treated pipes, creating a biofilm to fight future F.O.G. buildup.

JetBugs

Part of the **deFOG** family of grease control products:

JetBugs

dispenser

- Installs on any combination equipment.
- Doses product directly from swappable 6-gallon pails; no messy material transfer.
- Injects JetBugs into water line at proper ratio.
- Toggles on/off (for hydro excavation with no residual degreaser).

JetBugs	jetting/pigging	chemicals	manual cleaning
